

Amendments to the Claims:

The following Listing of Claims replaces all prior versions and listings of the claims in the present application.

Listing of Claims:

1. (Currently Amended) The method of claim 44, wherein Pressurisable container for storing and ejecting liquid, the container comprising a) a front wall having or surrounding a cavity corresponding to the form of an open vessel, b) an opening in the front wall adapted for ejection of the liquid from the container, said opening defining a container axis, c) optionally a sealing over the opening adapted for temporary use, and d) a rear wall closing and sealing the open part of the front wall vessel to confine a space for the liquid in the container, the rear wall running at least partially perpendicular to the container axis and being displaceable or deformable for movement towards the opening to pressurize the container liquid, characterized in the improvement comprising,
that the front wall is substantially rigid in relation to the rear wall,
that the rear wall before pressurizing the container is substantially flat or substantially single curved and
that the rear wall is deformable under stretching to substantially fill out the container cavity.

2. (Currently Amended) The method container of claim 1, characterized in that wherein the cavity has the form of a generally concave deepening when seen from the rear wall side.

3. (Currently Amended) The method container of claim 1, characterized in that wherein the cavity has little, ~~and preferably or no~~ undercut parts when seen from the rear side.

4. (Currently Amended) The method container of claim 1, characterized in that wherein the front wall has a roughly constant thickness when measured normal to the cavity surface towards the front wall.

5. (Currently Amended) The method container of claim 1, characterized in that wherein the front wall has thickness, as measured normal to the cavity surface towards the front wall, increasing when moving in a direction away from the axis.

6. (Currently Amended) The method container of claim 1, characterized in that wherein the front surface of the front wall is substantially flat or substantially single-curved, at least in the area around the opening.

7. (Currently Amended) The method container of claim 1, characterized in that wherein the rear surface of the front wall is substantially single-curved, at least in the area around the cavity.

8. (Currently Amended) The method container of claim 1, characterized in that wherein the front and rear surfaces of the front wall ~~in the neighborhood of adjacent~~ the cavity, ~~but disregarding cavity and opening as such,~~ are substantially parallel or concentric.

9. (Currently Amended) The method container of claim 8, characterized in that
wherein the front wall has the an overall shape of a plate or a cylinder part.

10. (Currently Amended) The method container of claim 1, characterized in that
wherein the opening ~~duct~~ has a cross-section which is one of roughly constant, roughly
converging, roughly diverging or a combination thereof.

11. (Currently Amended) The method container of claim 1, characterized in that
wherein the opening is designed to assist in atomizing the liquid.

12. (Currently Amended) The method container of claim 1, characterized in that
wherein the opening is designed to assist in forming a coherent linear liquid stream.

13. (Currently Amended) The method container of claim 1, characterized in that
wherein the front wall front side is formed with has a cut-out area around the opening.

14. (Currently Amended) The method container of claim 1, characterized in that
wherein the container is connected to at least one other container to form a multiple container
unit.

15. (Currently Amended) The method container of claim 14, characterized in that
wherein the front wall surface surfaces of several containers lies are arranged in the same flat
or single-curved plane.

16. (Currently Amended) The method container of claim 15, characterized in that
wherein the front wall surfaces of several containers are covered by a single sheet material.

17. (Currently Amended) The method container of claim 14, characterized in that
wherein the rear wall surface surfaces of several containers lies are arranged in the same flat
or single-curved plane.

18. (Currently Amended) The method container of claim 17, characterized in that
wherein the rear wall surfaces of several containers are covered by a single sheet material.

19. (Currently Amended) The method container of claim 14, characterized in that
wherein the unit is a substantially rigid and self-bearing structure.

20. (Currently Amended) The method container of claim 19, characterized in that
wherein the unit comprises an enlarged front wall structure in which several cavities with
openings are provided to form the multiple containers.

21. (Currently Amended) The method container of claim 20, characterized in that
wherein the front and rear surfaces of the front wall structure are substantially parallel in the
neighborhood of adjacent the cavities, when disregarding the cavities and openings as such, to
give form a general plate form.

22. (Currently Amended) The method container of claim 21, characterized in that
wherein the front wall structure has the overall shape of a disc.

23. (Currently Amended) The method ~~container~~ of claim 21, characterized in that
wherein the several containers are positioned along at least one circle concentric with the disc periphery.

24. (Currently Amended) The method ~~container~~ of claim 20, characterized in that
wherein the front and rear surfaces of the front wall structure are substantially single-curved and concentric ~~in the neighborhood of adjacent~~ the cavities, ~~when disregarding the cavities and openings as such~~.

25. (Currently Amended) The method ~~container~~ of claim 24, characterized in that
wherein the front wall structure has the overall shape of a full or partial cylinder.

26. (Currently Amended) The method ~~container~~ of claim 25, characterized in that
wherein the several containers are positioned over two dimensions of the cylinder surface.

27. (Currently Amended) The method ~~container~~ of claim 1, characterized in that
wherein the rear wall is folded in a continuous or discontinuous manner.

28. (Currently Amended) The method ~~container~~ of claim 1, characterized in that
wherein the rear wall has substantially the same overall shape as the rear surface of the front wall.

29. (Currently Amended) The method container of claim 1, characterized in that
wherein the rear wall is ~~designed to be deformed~~ elastically deformable.

30. (Currently Amended) The method container of claim 1, characterized in that
wherein the rear wall is designed to be deformed inelastically or permanently.

31. (Currently Amended) The method container of claim 1, characterized in that
wherein the rear wall comprises a laminate.

32. (Currently Amended) The method container of claim 1, characterized in that
wherein the rear wall comprises a metal layer.

33. (Currently Amended) The method container of claim 1, characterized in that
wherein a temporary sealing is provided over the opening.

34. (Currently Amended) The method container of claim 33, characterized in that
wherein the sealing is rupturable or removable.

35. (Currently Amended) The method container of claim 33, characterized in that
wherein the sealing comprises a flat or single-curved sheet.

36. (Currently Amended) The method container of claim 1, characterized in that
wherein the liquid space volume is less than 25 microliter, ~~preferably less than 15 and most~~
~~preferably less than 10 microliter~~.

37. (Currently Amended) The method container of claim 1, characterized in that
wherein the opening diameter is between 10 and 1000 micron, preferably between 20 and 800
micron.

38. (Currently Amended) The method container of claim 1, characterized in that
wherein the front front wall thickness is between 0,5 0,5 and 10 mm, preferably between 1 and
5 mm.

39. (Currently Amended) The method container of claim 1, characterized in that
wherein the maximum cavity diameter is about 1 to 20 mm, preferably between 2 and 10 mm.

40.-43. (Cancelled).

44. (Currently Amended) A method for manufacture of a container containing liquid, the container comprising a) a front wall having or surrounding a cavity corresponding to the form of an open vessel, b) an opening in the front wall adapted for ejection of the liquid from the container, said opening defining a container axis, c) optionally a sealing over the opening adapted for temporary use, and d) a rear wall closing and sealing the open part of the front wall vessel to confine a space for the liquid in the container, the rear wall running at least partially perpendicular to the container axis and being displaceable or deformable for movement towards the opening to pressurize the container liquid, characterized in the improvement comprising, the method comprising

forming a front wall with a cavity in the form of a vessel with an opening connecting the vessel with the front wall front surface,
introducing liquid into the vessel cavity, and
attaching and adhering a flat or single-curved rear wall film to a ~~the~~ vessel cavity open part to enclose the liquid in the container.

45. (Currently Amended) The method of claim 44, characterized in that wherein the step of forming the front wall with a cavity and an opening is by injection molding.

46. (Currently Amended) The method of claim 44, characterized in that wherein the step of adhering the rear wall film is by welding.

47. (Currently Amended) The method of claim 46, characterized in wherein the step of welding is by heat welding.

48. (Currently Amended) The method of claim 44, wherein characterized in the step of adhering a flat or single-curved sealing film is adhered over the open part opening.

49. (Currently Amended) The method of claim 44, characterized in the step of forming a wherein the front wall is formed with more than one cavity.

50. (Currently Amended) The method of claim 49, characterized in the step of adhering wherein the rear wall film is adhered over more than one cavity.

51. (Currently Amended) The method of claim 49, characterized in the step of adhering wherein a flat or single-curved film is adhered over more than one cavity.

52. (Cancelled).

53. (Currently Amended) A container containing liquid, characterized in that it is manufactured according to the method of ~~claim 44 any of claims 44 to 53~~.

54.92. (Cancelled).
